

week-3

MON - STEFANIE

slides

[260511_20_Sound_VisualMusic.pdf](#)

text 1

[Gruppe1_Magnusson_Live_Coding_Auszuege_2014.pdf](#)

two definitions

weak - prewritten codes, only changing parameters, etc.

strong - really live coding, actively coding writing algorithms live

examples

Slub

There is near to no audience engagement during live coding sessions, but collectives like unsortedlove / PowerBooks_Unplugged break that behavior by including the audience in the creating.

aa-cell

no graphical visualizations of algorithm just code

PowerBooks_UnPlugged

ensemble of 6 performers who make wireless network to share code in a live-coding performance for collaborative coding

-sit among the audience = Audience engagement and involvement

-sharing codes through network = collaboration through network protocols

-changing stuff and send it to other performers = "liveness" and the ability to control existing structures

WED - YANN

VB-Cable

sound symbol (oben homescreen) as output VB-Cable

Dienstprogramme -> Audio-MIDI-Setup -> create Multiausgangsgerät -> macbook pro
Lautsprecher + VB-Cable -> sound symbol (oben homescreen) as Multiausgangsgerät

then VCV Rack -> audio -> input VB-Rack

and p5LIVE -> microfon change to input = VC-Cable

strudel

<https://strudel.cc/learn/getting-started/> (strudel documentation)

<https://tidalcycles.org/> (live coding music with algorithmic patterns)

(with sound always chrome, better)

INTRODUCTION

1

```
