

Tutorial:

Your first hour making electronic music (Ableton Live orientation & Drum programming)

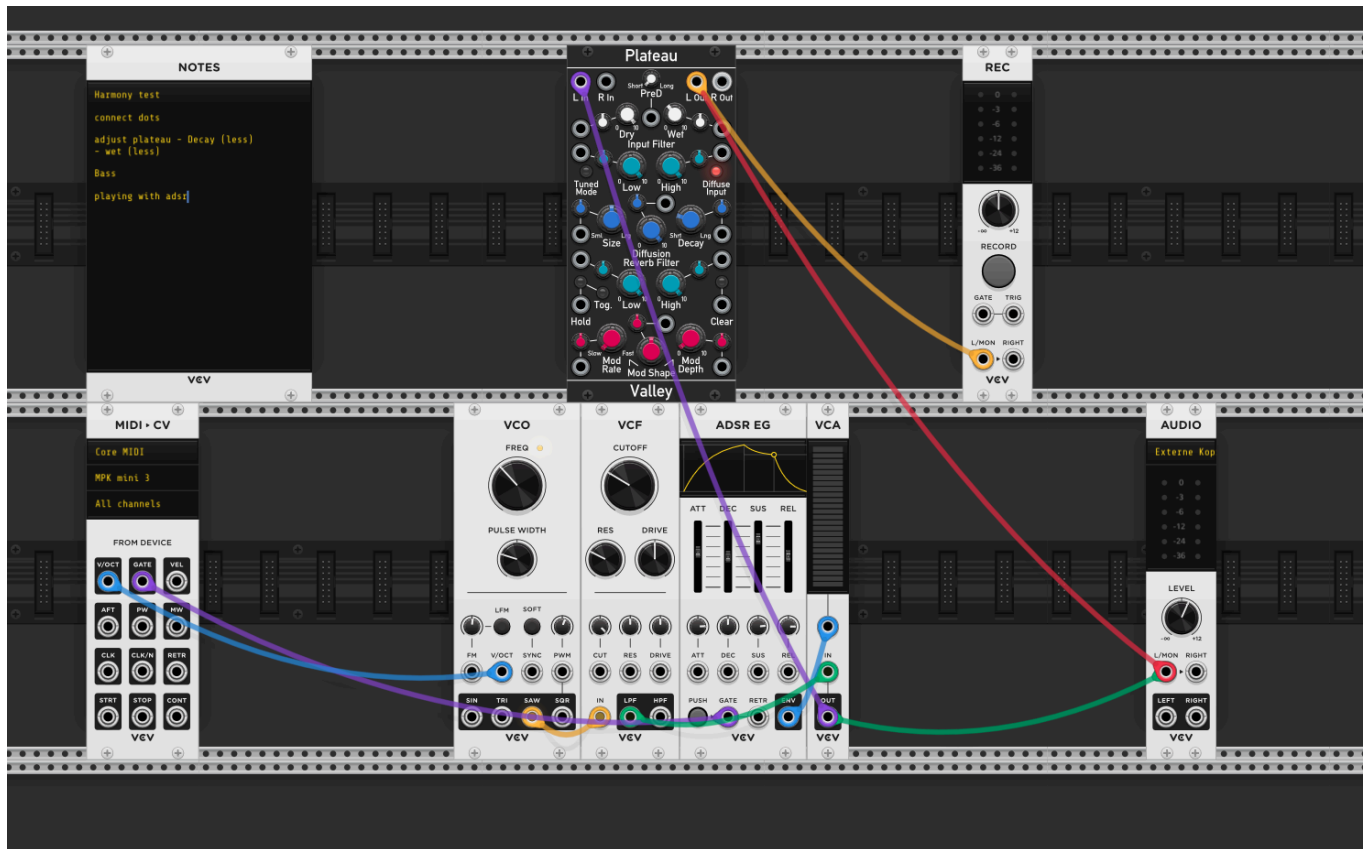

<https://www.youtube.com/watch?v=okhZ65RbTe8>

make a track in ableton

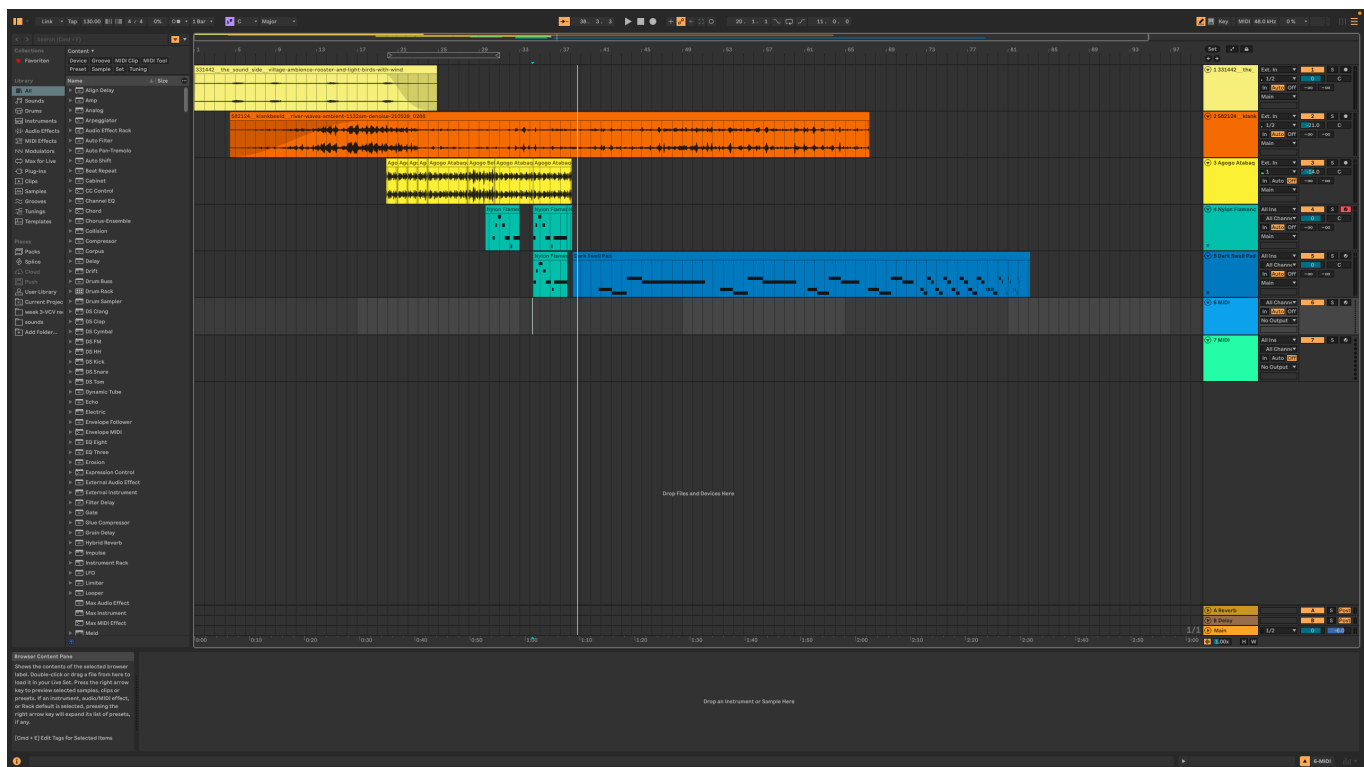

add; field recordings, sample for midi,

field recordings from freesound.org

VCV: Bass

play with adsr EG - get good key - sound ratio

played around

started with field recordings, rooster because its the first sound i think of when thinking about the place my parents come from

after water - wanted some "flow" and movement

added agogo sound - "brazilian"

played nylon guitar - played around with black keys until i found something interesting

used VCV sound "harmony" very deep sound - should come somewhere around the middle as transition to electronic

cutting out 1 rooster

starting with water, then rooster

harmony comes later

agogo sound has different volumes now , so its not to steady
