Day 1

Mid-term Presentations

+CO Creative Coding

AI's Hidden Water Footprint

For the mid-term presentation on Monday, May 18th, we decided to showcase the initial visuals for our project, "AI's Hidden Water Footprint". Our main focus so far has been on the coding; we will develop the audio aspect in the next phase of the module.

I wanted to generate water effects by programming, starting with the typography. My goal was to create a visual illusion where the text appears to dissolve into water. Initially, I scattered the typography across the screen using a function that generates text at the cursor's location upon a mouse click. When overlapping in the same position, it created a shimmering effect reminiscent of moving water.

To build on this, I consulted Gemini to implement a blending effect for the text. Utilizing a sine wave made it possible to smoothly transition the effects and cause the typography to fade away.

Alternatively, I experimented with a code snippet that simulates rain. While rain is not directly linked to the water consumption of data centers, it allowed me to explore different interactive elements. The digital rain reacts to the cursor, changing speed and shifting direction from left to right based on user input.

These two snippets are our first prototypes for the final performance. While there is still a lot of trial and error involved, successfully coding a water-like effect feels like a great first step.

Alongside the technical work, I researched the topic further. Even though I was aware of the environmental impact of data centers, the statistics were startling.

Official data on water consumption remains scarce. However, the

Day 2

HEK (Haus der Elektronischen Künste)

Neue Rituale

[für das Ende der Welt]

Die Ausstellung **Neue Rituale [für das Ende der Welt]** wirft einen Blick auf die sich neu formenden gesellschaftlichen Strategien im Umgang mit der schwierigen Weltlage. Interessant ist, dass gegenwärtig gerade in der Verbindung von Technologie und Spiritualität neue rituelle Praktiken entstehen. Die internationale Gruppenausstellung bringt Positionen zusammen, die neue Rituale als Coping-Mechanismen entwerfen, um der gegenwärtigen Weltuntergangsstimmung zu trotzen. Die Künstler:innen in New Rituals erforschen welche symbolischen Handlungen uns zusammenhalten können, wenn der Himmel einstürzt. Welche neuen Mythologien könnten uns helfen, das Ende der Welt, wie wir sie kennen, zu überleben — und zu verwandeln?

Künstler:innen: Zach Blas, S()fia Braga, Stefanie Egedy, Sian Fan, Teresa Fernández-Pello, Anan Fries, Dorota Gawęda und Eglé Kulbokaitė, Auriea Harvey, Maya Hottarek, Etsuko Ichihara, Christiane Peschek, Skawennati, Robin Meier Wiratunga

Kurator:innen: Anan Fries und Marlene Wenger

Tinguely Museum

A photograph of two people rappelling down a rope against a solid purple background. The person at the top is in a dynamic pose, with one arm extended. The person below is also in a dynamic pose, with legs spread. The text 'ANGELICA MESITI REVERB' is overlaid in large, bold, yellow capital letters on the left side of the image.

ANGELICA MESITI REVERB

Angelica Mesiti, *The Rites of When* (Videostill), 2024, 7-Kanal-HD-Videoinstallation © 2026 ProLitteris, Zürich; Copyright the artist

In an era shaped by digital media, *Reverb* draws attention to alternative forms of human communication. The exhibition brings together five video works by the Australian, Paris

based artist Angelica Mesiti who combines different disciplines in poetic ways. The works illustrate the enchantment of the everyday and show how cultural traditions, rituals, music and sounds shape identity and foster community.

Day 3

Input Stefanie Bräuer

WED, 20/05/26

Visual Music, Weibliche Elektronik

Vortex (series of concerts in San Francisco)

Laszlo Moholy-Nagy
– Lichtspiel (Stummfilm)

Weibliche Elektronik oder eine andere Geschichte elektronischer Musik

Éliane Radigue

Born 24 January 1932 in Paris

Died 23 February 2026

Was married to Arman

Studied at Studio d'Essai (RTF in Paris)

Assistant of Pierre Schaeffer

She published every 3 years a bigger composition

She worked mostly with an ARP 2500 Modularsystem (looking like VCV Rack) and tape machines

Day 4

Selbststudium

Research for our topic as well as playing around with the code and searching for a sound that would fit the whole project.

For the sound: Pixabay was my way to go. I was looking for something that still has the sound of water flowing in the background but has some techno beats as well. I found the perfect mixture! "Flying over water"
