

week-5

Day 1

Pfingstmontag

Day 2

Sick

Day 3

Selbststudium + Support (online)

WED, 27/05/26
AI Water Consumption

Concept

1:

Starting with a random question that humans ask ChatGPT

- How can I solve this math problem?
- Can I put lime instead of lemon in this recipe?
- Is it okay to eat food that is past its best-by date?
- Why is the sky blue?

And so on... Dropping more and more questions until everything is flooded

2:

Showing videos (breaking news?) in which the headline is how much water AI costs

3:

Code that resembles water and showing how much water is actually used to cool data centres

Day 4

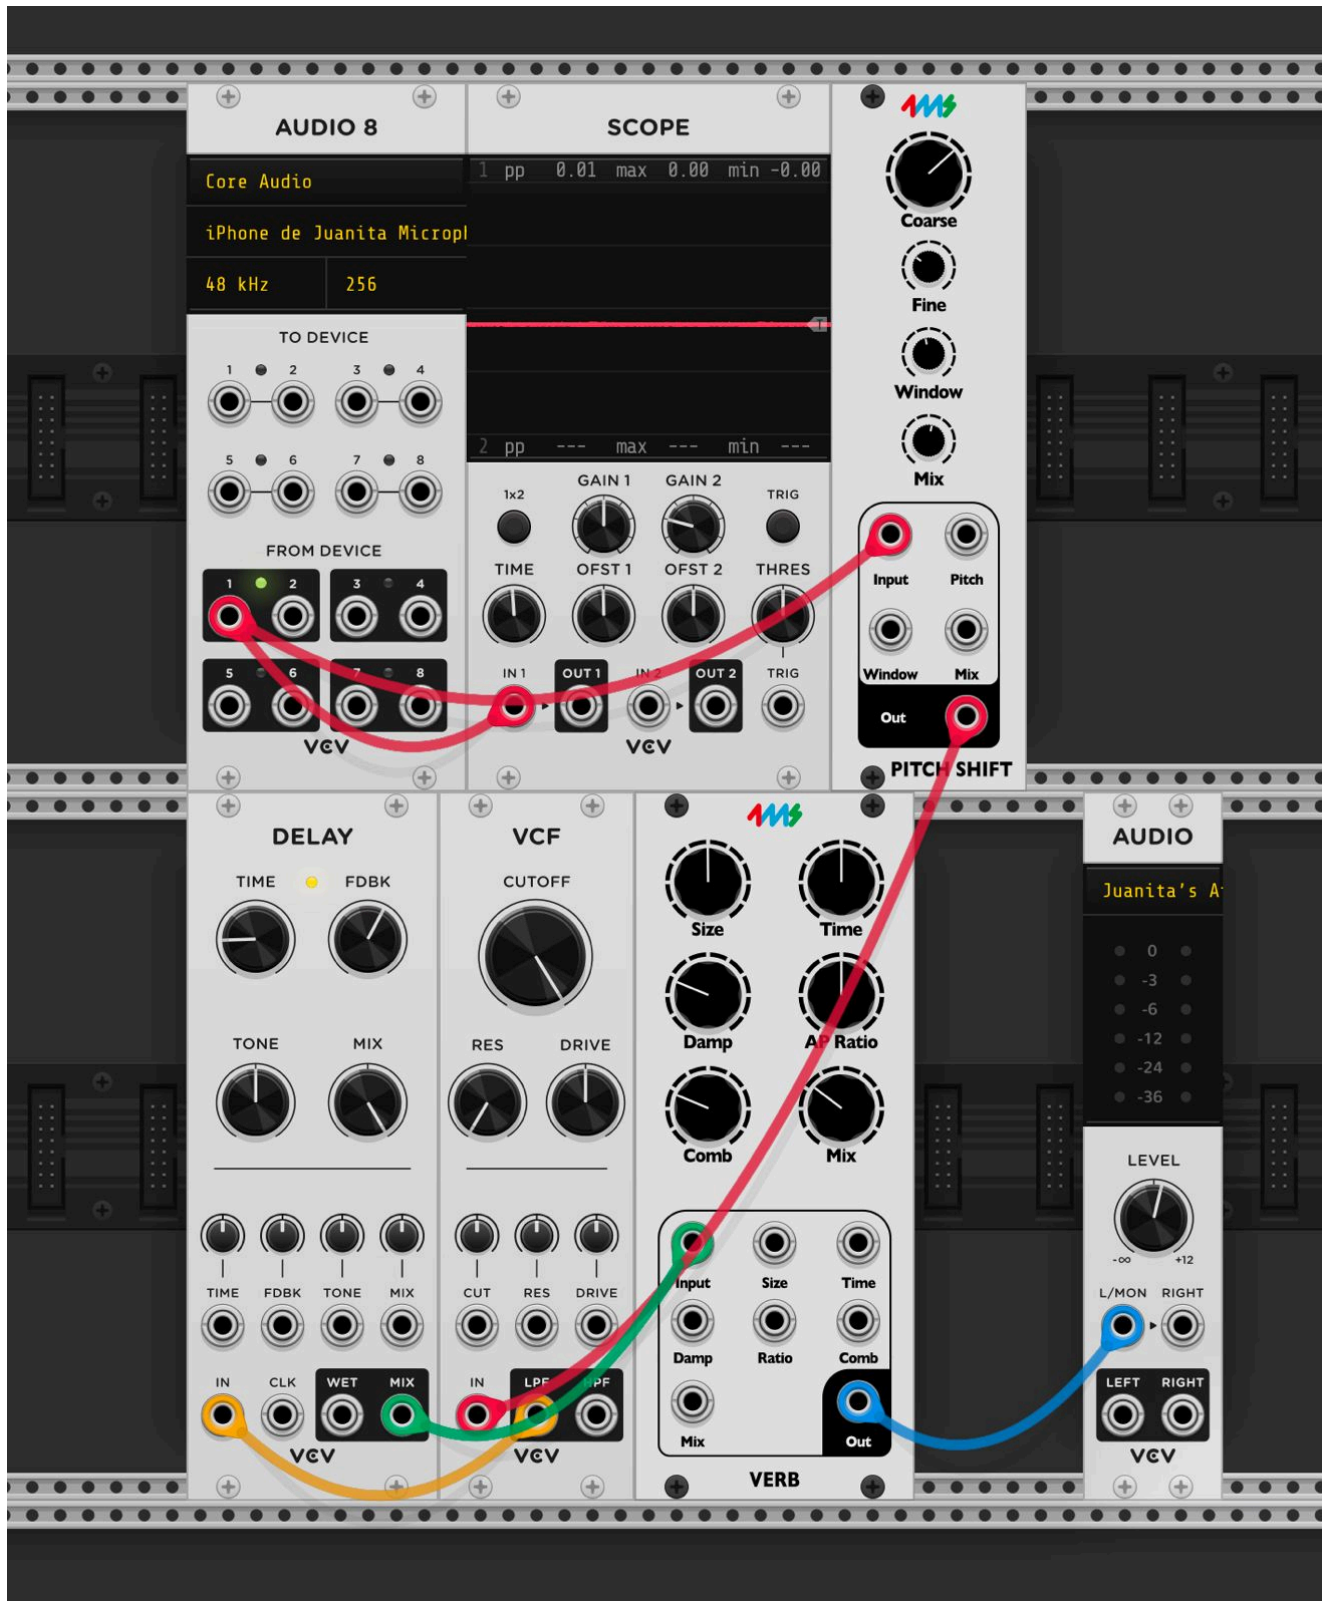

Selbststudium + Support (online)

Questions for the Code

- Why is the sky blue?
- Why is the water blue?
- What shall I cook for tonight?
- Is it okay to put lime instead of lemon in this recipe?
- Do my friends hate me?
- I have cooked pasta two days ago, can I still eat it?
- Where do birds sleep?
- Do androids dream of electric sheep?
- What is a paradox?
- Is there enough water?
- Can you hear me?
- Is there anybody out there?
- How can we live without water?
- Can we live without water?
- What is water used for?
- Is there enough water?

Figuring out how to use the microphone to pitch the voice with VCV Rack

Before I only used blue color for the water.

The idea is to change the color to brown to show the impact of the water consumption that turns into dirty water.

```
28 button.mousePressed(function(event) {
29   addNewText();
